

| | | | |
|-----|---|--|----|
| L1 | Introduction to the nucleation and growth of protein crystals | Peter G. Vekilov | 13 |
| L2 | Conventional crystallization methods and their modifications | Jeroen R. Mesters | 13 |
| L3 | Crystallization of membrane proteins in lipidic mesophases | Martin Caffrey | 14 |
| L4 | Knowledge-based crystallogensis methods to grow better crystals for structural biology | Richard Giegé, Claude Sauter | 15 |
| L5 | Crystallization and Crystallographic Analysis in a Microfluidic Chip | Claude Sauter | 15 |
| L6 | Interpretation of the crystallization drop results | Terese Bergfors | 16 |
| L7 | The use of microseeding in protein crystallization: practical variations on the Microseed Matrix Screening (MMS) method | Patrick Shaw Stewart | 17 |
| L8 | Counter diffusion methods for protein crystallization and screening: gels, capillary volumes and microgravity | José A. Gavira | 18 |
| L9 | “What to do if everything has failed” | Terese Bergfors | 18 |
| L10 | On the use of additives in protein crystallization | Rolf Hilgenfeld | 19 |
| L11 | Unconventional Crystallization Techniques for Screening and Optimisation | Naomi E. Chayen | 19 |
| L12 | <i>In situ</i> dynamic light scattering for analysis and optimization of crystallization processes | Christian Betzel | 20 |
| L13 | <i>E.coli</i> - a factory for recombinant proteins | Lubomír Janda | 21 |
| L14 | The road from protein expression and purification to protein crystallization | Estela Pineda Molina | 21 |
| L15 | Protein as the main variable in crystallization | Eubica Urbániková | 22 |
| L16 | Preparation of protein samples for crystallization experiments | Pavína Řezáčová | 22 |
| L17 | Rational biochemical approaches to improve crystallogensis | Jannette Carey | 23 |
| L18 | Tips and tricks for protein crystal manipulation and handling | José A. Gavira | 23 |
| L19 | Publication of scientific results with emphasis on crystallization communications | Howard Einspahr | 24 |
| L20 | Nucleation of protein crystals: novel insights | Peter G. Vekilov | 24 |
| L21 | The growth of large crystals for neutron diffraction: Thermal control | Monika Budayova-Spano | 25 |
| L22 | Illuminating the Screening Process with Fluorescence | Marc Pusey | 26 |
| L23 | Ready, set, screen: X8 PROSPECTOR | Marianna Biadene | 26 |
| E0 | Introduction to lab exercises - macromolecular crystallization | Ivana Kutá Smatanová | 27 |
| E1 | Conventional techniques and their modifications, crystallization of own proteins | Jeroen Mesters | 30 |
| E2 | Crystallization of membrane proteins in lipidic mesophases | Martin Caffrey | 31 |
| E3 | Observation of crystal growth / Seeding | Terese Bergfors | 31 |
| E4 | Crystallization in Microfluidic Chips | Claude Sauter | 32 |
| E5 | Crystallization under oil - Unconventional Crystallization Techniques for Screening and Optimisation | Naomi E. Chayen, Lata Govada, Sahir Khurshid | 32 |
| E6 | Additive experiments, microseeding, grids for optimization; optimization techniques using automatic contact dispensing | Patrick Shaw Stewart | 33 |
| E7 | Dynamic light scattering | Karsten Dierks | 33 |
| E8 | Protein crystallization using the GCB | José A. Gavira | 34 |
| E9 | Conventional techniques and crystallization of own proteins | Eubica Urbániková | 34 |
| E10 | Crystallization of own proteins using commercial screening kits | Eubica Urbániková | 35 |
| E11 | Publication of scientific results with emphasis on crystallization communications | Howard Einspahr | 35 |
| E12 | Limited proteolysis | Jannette Carey | 35 |
| E13 | Crystal observation, testing, handling, mounting and cryocooling | Petr Páchl, Jiří Brynda | 36 |
