

OLYMPUS

Your Vision, Our Future

BRINGING CONFOCAL LASER
SCANNING MICROSCOPY TO EVERYONE:
THE NEW OLYMPUS FLUOVIEW FV10i

The Olympus Fluoview FV10i makes advanced confocal laser scanning microscopy as straightforward as 1-2-3:

Set – sample mapping with autofocus provides overview images

Select – users choose areas of interest for full imaging from the overview images

Shoot – the navigation wizard guides the user to the best image

The peerless self-contained design integrates all of the necessary functions such as: laser combiner, scanning unit, motorised stage, fully corrected optics, incubator, vibration isolation and even the dark room! An oil immersion model provides high-resolution imaging and a water immersion model is perfect for complex time-lapse imaging.
