

Advanced methods in macromolecular crystallization IV

FEBS combined practical and lecture course PLC10 015

Academic and University Center, Nové Hrady, June 25 - July 2, 2010

Course Material

Topics

E.coli - a factory for recombinant proteins
The road from protein expression and purification to protein crystallization
Preparation of protein samples for crystallization experiments
Rational biochemical approaches to improve crystallogenesis
Nucleation of protein crystals
Additives in protein crystallization
Advanced light scattering methods
Standard crystallization methods
Conventional crystallization methods and their modifications
Crystallization under oil
Advanced crystallization techniques
Lipidic cubic phase crystallization
Microseeding with automatic systems
Interpretation of the crystallization drop results
Crystallization and crystallographic analysis in a microfluidic chip
Tips and tricks for protein crystal manipulation
Crystal mounting and freezing
Screening the diffraction quality of protein crystals
The growth of large crystals for neutron diffraction:
 Thermal control
Illuminating the Screening Process with Fluorescence
Crystallogenesis methods for structural biology
Publishing your crystallization results

Organizers

Dr. Ivana Kutá Smatanová

Institute of Physical Biology USB CB and
Institute of Systems Biology and Ecology AS CR
Zámek 136,
CZ-373 33 Nové Hrady
Czech Republic

Dr. Pavlína Řezáčová

Institute of Organic Chemistry and Biochemistry and
Institute of Molecular Genetics, Academy of Sciences of
the Czech Republic
Flemingovo nám. 2,
CZ-166 10 Prague 6
Czech Republic

Prof. Rolf Hilgenfeld

Institute of Biochemistry
University of Luebeck
Ratzeburger Allee 160
23538 Luebeck
Germany

Speakers and tutors
