

# Aperiodic 2015

Praha, Czech Republic, August 30 - September 4, 2015

## Collected Abstracts

|                                       |                                       |     |
|---------------------------------------|---------------------------------------|-----|
| Introduction - historical backgrounds | 217                                   |     |
| Tutorials                             | 218                                   |     |
| Sessions                              | 220                                   |     |
| I                                     | Monday, August 31, morning            | 220 |
| II                                    | Monday, August 31, afternoon          | 225 |
| III                                   | Monday, August 31, late afternoon     | 229 |
| IV                                    | Tuesday, September 1, morning         | 233 |
| V                                     | Tuesday, September 1, afternoon       | 237 |
| VI                                    | Tuesday, September 1, late afternoon  | 242 |
| VII                                   | Wednesday, September 2, morning       | 246 |
| VIII                                  | Thursday, September 3, morning        | 249 |
| IX                                    | Thursday, September 3, afternoon      | 253 |
| X                                     | Thursday, September 3, late afternoon | 257 |
| XI                                    | Friday, September 4, morning          | 260 |
| XII                                   | Friday, September 4, morning          | 264 |
| Poster Topics                         | 267                                   |     |
| P1–P10                                | Modulated structures                  | 267 |
| P11–P14                               | Magnetic structures                   | 277 |
| P15–P29                               | Quasicrystals                         | 280 |
| P30–P42                               | Theory                                | 293 |
| P43–P50                               | Experimental                          | 302 |
| Author Index                          | 308                                   |     |

## List of posters

|     |                                                                                                                               |                    |     |
|-----|-------------------------------------------------------------------------------------------------------------------------------|--------------------|-----|
| P1  | Modulated composite structure of $\text{Tb}_{(1+x)}\text{Re}_4\text{B}_4$ ( $x \sim 0.2$ )                                    | Akselrud, L.       | 267 |
| P2  | Modulated crystal structure of $\text{Eu}_2\text{Rh}_{1-x}\text{Ga}_5$ ( $x \approx 0.21$ )                                   | Sichevych, O.      | 268 |
| P3  | Incommensurate modulation and thermal expansion of $\text{Sr}_3\text{B}_{2+x}\text{Si}_{1-x}\text{O}_{8-x/2}$ solid solutions | Volkov, S.         | 269 |
| P4  | New incommensurate modulated structures in the scheelite family                                                               | Morozov, V.        | 270 |
| P5  | Statistical description of diffraction pattern of harmonically modulated structures                                           | Strzalka, R.       | 271 |
| P6  | Relation between chemistry and modulation in molecular materials                                                              | Christensen, K. E. | 273 |
| P7  | Temperature-pressure phase diagram of ferroelectric $\text{Sn}_2\text{P}_2\text{S}_6$                                         | Ondrejko, P.       | 273 |
| P8  | Soft chemical control of the crystal structure and properties of $\text{Sr}_2\text{MnO}_2\text{Cu}_{1.5-8}\text{S}_2$         | Blandy, J.         | 274 |
| P9  | (3 + 1) dimensional modulated crystal structure of $\text{Cs}_3\text{ScSi}_6\text{O}_{15}$                                    | Hejny, C.          | 275 |
| P10 | Structure modulation in NLO materials $\text{Cs}_2\text{TB}_4\text{O}_9$ (T = Ge, Si)                                         | Zhou, Z.           | 276 |
| P11 | Magnetism in rare earth quasicrystals: RKKY interactions and ordering                                                         | Thiem, S.          | 277 |
| P12 | Synthesis and magnetic properties of Au-Al-Gd approximants                                                                    | Ishikawa, A.       | 277 |
| P13 | Phase transition to the modulated structure in hemimellitic acid compound                                                     | Kusz, J.           | 278 |

|     |                                                                                                                                                                                        |                      |     |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----|
| P14 | Importance of the interstitial region for producing magnetism in nanostructured i-Al <sub>64</sub> Cu <sub>23</sub> Fe <sub>13</sub> aperiodic crystal                                 | Landauro, C.V.       | 279 |
| P15 | Atomic-scale chemical ordering of Co and Ni in crystalline approximant related to Al-Co-Ni decagonal quasicrystal                                                                      | Yubuta, K.           | 280 |
| P16 | Multiple diffraction in an Icosahedral Al-Cu-Ru quasicrystal: X-ray experiment and simulation                                                                                          | Takakura, H.         | 281 |
| P17 | Growth of Pb on the threefold surface of a Ag-In-Yb quasicrystal                                                                                                                       | Thorn, S.            | 282 |
| P18 | A new type superstructure in the Al <sub>11</sub> TM <sub>4</sub> (TM = Ir, Rh) 1/0 quasicrystalline approximants                                                                      | Nishimoto, K.        | 283 |
| P19 | Estimation of the flip ratio in the 1D quasicrystal from the diffraction pattern                                                                                                       | Buganski, I.         | 284 |
| P20 | Atomic-scale chemical mapping of Tsai-type approximants using STEM-EDS                                                                                                                 | So, Y. G.            | 284 |
| P21 | Single crystal growth and study of decagonal Al-Co-Cu and Al-Co-Ni quasicrystals                                                                                                       | Klyueva, M.          | 285 |
| P22 | Atomic structure and diffuse scattering of ternary Yb-Cd-Mg icosahedral quasicrystal                                                                                                   | Yamada, T.           | 286 |
| P23 | Electron microscopy studies of binary nanocolloidal quasicrystals                                                                                                                      | Sakamoto, Y.         | 287 |
| P24 | Uniform distribution & (Quasi-)Crystallography                                                                                                                                         | Hornfeck, W.         | 288 |
| P25 | To be, or not to be, a quasicrystal: The strange case of NiZr                                                                                                                          | Hornfeck, W.         | 289 |
| P26 | Structure of the orthorhombic $\epsilon_{16}$ Phase in the Al-Pd-Ru System                                                                                                             | Uchino, T.           | 290 |
| P27 | Melting process of decagonal colloidal quasicrystals                                                                                                                                   | Martinsons, M.       | 291 |
| P28 | Catalytic mechanism in quasicrystals based on localized anharmonic vibrations                                                                                                          | Dubinko, V.          | 291 |
| P29 | Phason strain and structural perfection in the Cd-Yb icosahedral quasicrystal                                                                                                          | Yamada, T.           | 292 |
| P30 | Tiling vertices and the spacing distribution of its radial projections                                                                                                                 | Jakobi, T.           | 293 |
| P31 | Squarefree numbers and their diffraction                                                                                                                                               | Baake, M.            | 294 |
| P32 | Diffraction intensities of the random noble means substitutions                                                                                                                        | Spindeler, T.        | 294 |
| P33 | Diffraction of a simple non-Pisot inflation                                                                                                                                            | Grimm, U.            | 295 |
| P34 | Shape limit in Voronoi tilings for Bernoulli spirals                                                                                                                                   | Yamagishi, Y.        | 296 |
| P35 | Engineering spectral crossover and flat band states in aperiodically distorted ladder networks                                                                                         | Chakrabarti, A.      | 297 |
| P36 | Similar submodules and coincidences of cubic modules                                                                                                                                   | Zeiner, P.           | 298 |
| P37 | Coincidence site patterns in the pinwheel tiling                                                                                                                                       | Lück, R.             | 298 |
| P38 | An Icosahedral quasicrystal as a golden modification of the icosagrid and its connection to the E8 lattice                                                                             | Fang, F.             | 299 |
| P39 | Octagonal type of the quasiperiodic succession algorithm                                                                                                                               | Gaenshirt, U.        | 299 |
| P40 | Structure factor for generalized Penrose tiling                                                                                                                                        | Chodyn, M.           | 300 |
| P41 | Electronic transport in ten most studied aperiodic systems                                                                                                                             | Sánchez, F.          | 301 |
| P42 | Aperiodic tilings from higher dimensional lattices                                                                                                                                     | Koca, M.             | 301 |
| P43 | Transrotational thin-film crystals                                                                                                                                                     | Kolosov, V. Yu.      | 302 |
| P44 | Partial isothermal section at 850 °C of Al-Pd-Co phase diagram                                                                                                                         | Černíčková, I.       | 304 |
| P45 | Isothermal section at 1000 °C of Al-Mn-Fe phase diagram in vicinity of Taylor phase                                                                                                    | Priputen, P.         | 304 |
| P46 | Flux growth of pure and Mn-modified alkali based Bi <sub>0.5</sub> (Na <sub>1-y</sub> K <sub>y</sub> ) <sub>0.5</sub> TiO <sub>3</sub> single crystals for optoelectronic applications | Bhandari, S.         | 305 |
| P47 | Kubo conductivity in one and two dimensional systems with aperiodically placed Fano defects                                                                                            | Ramírez, C.          | 305 |
| P48 | Spin wave excitation in aperiodic Co/Au multilayers                                                                                                                                    | Quispe-Marcatoma, J. | 306 |
| P49 | Photonic localization and transmittance in macroscopic aperiodic multilayers                                                                                                           | Munguía, J. G.       | 306 |
| P50 | Rietveld refinement and Spectroscopic studies of strontium britholites doped Nd <sup>3+</sup>                                                                                          | Hassine, A.          | 307 |
