

Czech Society for Structural Biology
Česká společnost pro strukturní biologii

www.structbio.org

The Czech Society for Structural Biology was established in March 2010 as an organization of scientists, students and other interested parties involved in application of structural biology methods. Its very beginning was also motivated by the development of European and national research infrastructures.

CSSB connects over eighty individual members from research groups of some twenty research institutes and universities in Czech and Slovak Republics, utilizing a wide spectrum of methods, including crystallography, NMR, mass spectrometry, microscopy, computational methods and other.

The annual national structural biology conference Discussions in structural molecular biology is organized by CSSB since 2010. It regularly welcomes over a hundred of participants in Nové Hradky, often with a renowned invited speaker.

The Society was recognized and accepted as a member of the Council of Scientific Societies of the Czech Republic. It provides a pool of experts in modern research topics and methods and is open to new members.

This year we are proud to participate in organization of the 18th Heart of Europe Bio-Crystallography Meeting in Kutná Hora.

Jan Dohnálek
Chairman of CSSB Council
