

## Posters

<b>P1-1</b>	<b>Jan Šaroun</b>	BEER – the neutron diffractometer for materials engineering research at the European Spallation Source	page 199
<b>P1-2</b>	<b>Pavel Strunz</b>	High-resolution neutron diffraction for finer studies of powder diffraction lines	201
<b>P1-3</b>	<b>Liang Zhou</b>	The Engineering Materials Diffractometer “EMD” at the China Spallation Neutron Source	203
<b>P1-4</b>	<b>Benedikt Schrode</b>	Optimized XRD measurement configurations for residual stress analysis with XRDynamic 500	204
<b>P1-5</b>	<b>Fabien Cazes</b>	Assessment of accuracy of a portable diffractometer for residual stress measurement.	204
<b>P1-6</b>	<b>Ryohei Okui</b>	Fundamental study on a 3D residual stress estimation method using X-ray diffraction for machined surface materials.	205
<b>P1-7</b>	<b>Balder Ortner</b>	The $\sin^2\psi$ and all similar methods should be replaced by something better	206
<b>P1-8</b>	<b>Mohammed Belassel</b>	Residual Stress Measurements Using Different Techniques, $\sin^2\psi$ and $\cos\alpha$	208
<b>P1-9</b>	<b>Kerian Wegerhoff</b>	GFAC national and international activities on residual stress evaluation	208
<b>P1-10</b>	<b>Gyula Török</b>	Trial of new treatment in case of big grains	210
<b>P1-11</b>	<b>Sebastian Wronski</b>	Role of the second order plastic incompatibility stresses on plastic deformation in deformed magnesium	210
<b>P1-12</b>	<b>Sebastian Send</b>	Depth-resolved residual stress analysis of mechanically processed WC-Co hardmetals by means of a multi-wavelength XRD method	212
<b>P1-13</b>	<b>Daniel Perez Gallego</b>	Evolution of shear residual stresses in steel specimens during the torsion test	213
<b>P1-14</b>	<b>Akimitsu Nezu</b>	Evaluation of tensile load stress and X-ray elastic constant of crystalline resin material by X-ray diffractometry.es	214
<b>P1-15</b>	<b>Dongok Kim</b>	Residual stress of EV bearing component with different operating condition	215
<b>P1-16</b>	<b>Suvi Santa-aho</b>	Long-time survey of laser processed calibration samples for Barkhausen noise method	216
<b>P1-17</b>	<b>Shilei Li</b>	Residual stress measurement of titanium welded blade by neutron and synchrotron X-ray diffraction techniques	217

<b>P2-1</b>	<b>Alessio Benincasa</b>	Experimental validation of a plasticity correction procedure for hole-drilling residual stress measurements	218
<b>P2-2</b>	<b>Simon Dechant</b>	Influence of Turning and Deep Rolling Processes on Bearing Fatigue Life	219
<b>P2-3</b>	<b>Pavol Dlhý</b>	The residual stress determination of the laboratory specimen by semi-destructive relaxation method	220
<b>P2-4</b>	<b>Tejas Gundgire</b>	Harnessing residual stresses and microstructure in laser powder bed fusion built 316L stainless steel through high-temperature heat treatment and severe shot peening	221
<b>P2-5</b>	<b>Bruno Leveil</b>	Numerical study of the deep-hole drilling method	221
<b>P2-6</b>	<b>JP Nobre</b>	Stress evaluation in a cross-ply GFRP-steel laminate by the incremental hole-drilling technique	222
<b>P2-7</b>	<b>Delphine Restraint</b>	Effect of SMAT on multiaxial fatigue properties of a 7075 Aluminium Alloy	229
<b>P2-8</b>	<b>Harihara Krishnan Sanakran</b>	Development of a numerical approach for the assessment of accuracy of relaxation methods and application towards a ring geometry.	224
<b>P2-9</b>	<b>Karel Trojan</b>	Optimization of 3D printing parameters to minimize residual stresses in maraging steel	225
<b>P2-10</b>	<b>Lorenz Engelking</b>	Residual stress analysis on a DED-Arc additive manufactured high-strength steel component using the contour method	226
<b>P2-11</b>	<b>Jeferson Araujo de Oliveira</b>	A novel cutting method for contour method measurements - a proof of principle	227
<b>P2-12</b>	<b>Andrzej Baczmanski</b>	High and Conventional Strain Rate Mechanical Response of Titanium Subjected to Severe Plastic Deformation	227
<b>P2-13</b>	<b>Artjom Bolender</b>	Impact of Hydrogen-Induced Effects and Residual Stress on the properties of 34CrMo4 in Slow Strain Rate Test	228
