

CtB2010

Dear Colleagues,

We are pleased to announce the 5th Central European Conference: Chemistry towards Biology! This year the event is taking place in Croatia, more precisely in a small picturesque town on the Adriatic coast, Primošten, from 8th to 11th September. Let us mention that Primošten is situated very closely to the Split airport and that there is a ferry from Ancona to Split. Finally, Split is connected to Zagreb via modern highway. All details are given on the web page given below.

The aim of the conference is to bring together scientists from the Central Europe working on problems in molecular biosciences. Chemists, biochemists, biologists, biophysicists and all other researchers working in this area will have opportunity to present their recent work in front of international forum of leading scientists working in the field. In a pleasant and stimulating atmosphere they will become acquainted with each other and learn about the research going on in their region.

The meeting should also provide a stimulus for young scientists from Central Europe to discuss their research and plans with the eminent scientists in the field as well as to make contacts and establish collaborations.

We made a lot of efforts to keep the conference costs low, 350 EUR for researchers and 250 EUR for students and accompanying persons. This includes the registration fee, accommodation, 3 meals per day during the entire conference and EXCURSION to KRKA lakes by BOAT! Further information, including plenary speakers and location is available at the conference web page: <http://spider.irb.hr/ctb2010/>

If you are interested in coming, we would appreciate if you could express your interest by E-mailing us at ctb2010@irb.hr providing your name and required information.

We are looking forward to meet you in Croatia in September.

Sincerely,

Organizers
