Posters

P1-1	**Jan Šaroun**	BEER – the neutron diffractometer for materials engineering research at the European Spallation Source	page 199
P1-2	**Pavel Strunz**	High-resolution neutron diffraction for finer studies of powder diffraction lines	201
P1-3	**Liang Zhou**	The Engineering Materials Diffractometer “EMD” at the China Spallation Neutron Source	203
P1-4	**Benedikt Schrode**	Optimized XRD measurement configurations for residual stress analysis with XRDynamic 500	204
P1-5	**Fabien Cazes**	Assessment of accuracy of a portable diffractometer for residual stress measurement.	204
P1-6	**Ryohei Okui**	Fundamental study on a 3D residual stress estimation method using X-ray diffraction for machined surface materials.	205
P1-7	**Balder Ortner**	The sin²psi and all similar methods should be replaced by something better	206
P1-8	**Mohammed Belassel**	Residual Stress Measurements Using Different Techniques, Sin²Psi and Cos-Alpha	208
P1-9	**Kerian Wegerhoff**	GFAC national and international activities on residual stress evaluation	208
P1-10	**Gyula Török**	Trial of new treatment in case of big grains	210
P1-11	**Sebastian Wronski**	Role of the second order plastic incompatibility stresses on plastic deformation in deformed magnesium	210
P1-12	**Sebastian Send**	Depth-resolved residual stress analysis of mechanically processed WC-Co hardmetals by means of a multi-wavelength XRD method	212
P1-13	**Daniel Perez Gallego**	Evolution of shear residual stresses in steel specimens during the torsion test	213
P1-14	**Akimitsu Nezu**	Evaluation of tensile load stress and X-ray elastic constant of crystalline resin material by X-ray diffractometry.es	214
P1-15	**Dongok Kim**	Residual stress of EV bearing component with different operating condition	215
P1-16	**Suvi Santa-aho**	Long-time survey of laser processed calibration samples for Barkhausen noise method	216
P1-17	**Shilei Li**	Residual stress measurement of titanium welded blade by neutron and synchrotron X-ray diffraction techniques	217
P2-1	**Alessio Benincasa**	Experimental validation of a plasticity correction procedure for hole-drilling residual stress measurements	218
P2-2	**Simon Dechant**	Influence of Turning and Deep Rolling Processes on Bearing Fatigue Life	219
P2-3	**Pavol Dlhý**	The residual stress determination of the laboratory specimen by semi-destructive relaxation method	220
P2-4	**Tejas Gundgire**	Harnessing residual stresses and microstructure in laser powder bed fusion built 316L stainless steel through high-temperature heat treatment and severe shot peening	221
P2-5	**Bruno Levieil**	Numerical study of the deep-hole drilling method	221
P2-6	**JP Nobre**	Stress evaluation in a cross-ply GFRP-steel laminate by the incremental hole-drilling technique	222
P2-7	**Delphine Retraint**	Effect of SMAT on multiaxial fatigue properties of a 7075 Aluminium Alloy	229
P2-8	**Harihara Krishnan Sanakran**	Development of a numerical approach for the assement of accuracy of relaxation methods and application towards a ring geometry.	224
P2-9	**Karel Trojan**	Optimization of 3D printing parameters to minimize residual stresses in maraging steel	225

P2-10	**Lorenz Engelking**	Residual stress analysis on a DED-Arc additive manufactured high-strength steel component using the contour method	226
P2-11	**Jeferson Araujo de Oliveira**	A novel cutting method for contour method mesurements - a proof of principle	227
P2-12	**Andrzej Baczmanski**	High and Conventional Strain Rate Mechanical Response of Titanium Subjected to Severe Plastic Deformation	227
P2-13	**Artjom Bolender**	Impact of Hydrogen-Induced Effects and Residual Stress on the properties of 34CrMo4 in Slow Strain Rate Test	228
